

Release	Date	Designer	Check	Comments
A1	10/01/2023	EB	SN	Initial drawing
A2	22/03/2023	EB	SN	[fixed] D1 is in the right direction (and DNP) [changed] top silk of NC214 (pin 1)
				ToDo: <ul style="list-style-type: none"> - [??] remplacer double mesures de courant de phase par mesure simple high side ? - [??] virer mesures température / contrôle fan - [??] changer connecteur flex pour un sliding

Major Tom is a power board driving 3 BLDC motors. It also add 3 temperature measurements and a fan control.

Nota :

- Only 2 current measurements are required
- Motor cabling (Maxon ECX TORQUE 22 M 24V):
 - phases in AWG18 (MicroFit AWG20-24)
 - encoders in AWG26 (PicoBlade AWG28-32).

so more or less OK...

Low-side phase currentSense requires sync between ADC and PWM (but cheap amplifiers).

https://docs.simplefoc.com/current_sense
(In-line Current Sense requires filtered
bi-dir amplifiers that are not easy to
source.)

- Vref 3.3V, gain 100V/V, R 10 mOhm
-> 3.3 A max / 0.2 W -> [1206]
- Amplifier, gain 100V/V, package SC70-6 :
- TSC214YCT (STMicro)
- NCS214RSQT2G (On Semi)

12V or 24V in regards to TVS diode D1.
(/\ Fan voltage)
